Power Reliability

# Power supply solutions

Power supplies, DC/DC converters, redundancy modules, and uninterruptible power supplies

# Power for superior system availability

## Leading technology with outstanding quality

You supply your systems safely with our QUINT, TRIO, UNO, and STEP product families. Power supplies, DC/DC converters, redundancy modules, and uninterruptible power supplies are harmonized to the demands of various industries when it comes to functionality and design.

### 1 Power supplies

With their various functionalities, performance classes, and designs, our power supplies are the right partner for your application.

- QUINT POWER: Automotive industry, systems manufacturing, process industry, ship building
- TRIO POWER: Machine building
- UNO POWER: Urban infrastructure
- STEP POWER: Building automation, e-mobility

### 2 DC/DC converters and DC/AC inverters

DC/DC converters supply your system with controlled DC voltage. With the DC/AC inverter, you are securely underway in your DC applications.

- DC/DC converters with SFB Technology for superior system availability and extreme applications
- DC/DC converters for the power range up to 100 W
- DC/DC converters for photovoltaic systems
- DC/AC inverters for generating alternating current

## 3

## Redundancy modules

With our redundant solutions, you secure systems with high demands on operational safety. They prevent the failure of one power supply unit from resulting in a downtime of the complete system.

- Active redundancy modules decouple, monitor, and control up to the load
- Passive redundancy modules decouple power supplies

## 4

## Uninterruptible power supplies

Use uninterrupted power supplies to supply your loads – even without a grid. We offer you the following solutions:

- POWER MANAGEMENT SUITE as configuration and management software
- DC UPS modules and AC UPS modules with an integrated interface, power supply, or energy storage device
- Comprehensive selection of energy storage devices
- DC UPS modules with integrated capacity and buffer modules

# Power supplies

## Compare your advantages

Maximize the availability of your systems with high-quality power supplies featuring leading technology. The product families differ with regard to their design, power, and functionality. Select your solution among our product families.

### QUINT POWER >100 W

- Powerful, and with high functionality
- For power up to 1000 W
- SFB Technology
- Preventive function monitoring
- Easy system extension
- Startup of difficult loads
- High level of immunity to interference
- Part of the COMPLETE line system

More information starting on page 6

### QUINT POWER <100 W

- Powerful and space-saving
- For power from 30 W to 100 W
- Preventive function monitoring
- Boost function for starting up difficult loads
- Free choice of connection technology

More information starting on page 12

### TRIO POWER

- Robust with standard functionality
- Solid plug-and-play solution for machine building
- Space-saving design
- Reliable due to dynamic boost with a powerful output characteristic curve
- Smart diagnostics with multicolor LEDs and grouping contact
- Optionally available with integrated device protection and IO-Link

More information starting on page 18

### UNO POWER

- Compact with basic functionality
- High power density and low idling losses
- Active function monitoring
- Large product range for all voltage levels
- Narrow housing from 22.5 to 126 mm wide
- Alignable without minimum clearance to neighboring modules

More information starting on page 24

## STEP POWER

- For industry and building automation
- Maximum energy efficiency due to very low idling losses and a high degree of efficiency
- Efficiency level VI
- EN 60335 enables use in domestic applications
- Push-in connection technology
- Flexible assembly: Can be snapped onto or screwed onto a level surface

More information starting on page 28

## IP67 POWER

- IP67 degree of protection for decentral supply in the field
- Electrically and mechanically very robust due to high vibration and shock resistance and electric strength
- Selection of various device connections

More information starting on page 32

## Shared features and differences

Power supplies of all product families enhance system availability. Each power supply features high operational safety, an international approval package, and a wide range input.

## Power supplies

# QUINT POWER

## Powerful with SFB Technology

The powerful QUINT POWER power supplies with SFB Technology, preventive function monitoring, and configurable settings safeguard your system availability.

### Your advantages >100 W

- SFB Technology selectively trips standard miniature circuit breakers
- Preventive function monitoring reports critical operating states before faults occur
- Power reserves for easy system extension and starting up difficult loads
- High efficiency, long service life, and maximum immunity with integrated gas discharge tube
- Available preconfigured: From a batch quantity of just 1

### SFB Technology

Designed by Phoenix Contact

# Technologies and advantages

## SFB (Selective Fuse Breaking) Technology

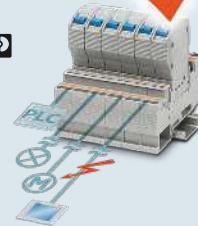

For high system availability, standard miniature circuit breakers must be tripped magnetically so that faulty current paths can be switched off selectively. SFB Technology supplies several times the nominal current for a short period, thus providing the necessary power reserve.

- Six times the nominal current for 15 ms triggers standard miniature circuit breakers quickly and reliably
- When short-circuits occur, faulty current paths are disconnected selectively
- Faults are isolated to ensure that key system parts remain in operation without interruptions

## SFB Technology

Designed by Phoenix Contact

## QUINT POWER >100 W

### Powerful with SFB Technology

Our powerful QUINT POWER power supplies with SFB Technology are ideally suited for safeguarding your system availability. The power reserve enables the easy extension of your system, as well as the trouble-free start-up of difficult loads. Static boost with sustained power of up to 125% is available for system extension. Dynamic boost of up to 200% for 5 s enables you to start difficult loads.

The range of features is rounded out by the customized configuration of signaling thresholds and characteristic curves.

## SFB Technology

Designed by Phoenix Contact

## QUINT POWER with IO-Link

The new communicative QUINT POWER power supply with IO-Link can be integrated into industrial networks quickly and easily.

With the integrated IO-Link interface, all the relevant operating data of the power supply, from the 3 AC side to the 24 V DC side, can be made available to the higher-level automation system. Calculating the usage-dependent service life enables predictive maintenance, raising preventative function monitoring to an entirely new level.

The power supply also enables configuration via IO-Link. The configuration is adopted directly after a device is replaced, saving time and avoiding user errors.

For more information, see page 10.

## High protection for your system

For extreme operating conditions, use the ideally matched combination of the PLUGTRAB-SEC surge protection device and the powerful fourth generation QUINT POWER power supply.

For more information and the conditions, search Item no. [2907928](#) on [www.phoenixcontact.com](http://www.phoenixcontact.com).

### 5-year warranty

If your fourth-generation QUINT POWER becomes damaged in the first five years following purchase despite the using this combination, you will receive a free replacement.

## QUINT POWER and CAPAROC – the communicative 24 V supply system

Combine the QUINT POWER IOL power supply with the CAPAROC circuit breaker system or the intelligent QUINT4 DC UPS (from rev. 05). This will supply and protect your system even more intelligently.

Our communicative 24 V supply system increases the data transparency of the entire system and provides information on all relevant operating and diagnostic data. The central interface to the system communication between QUINT POWER

and CAPAROC ensures simple and cost-efficient integration of the power supply into the network protocol of the circuit breaker system: The PROFINET interface enables complete transparency and access to the entire system. A web server enables on-site access to operating states, error messages, and setting details of the system solution. The supply solution offers complete data consistency, from the primary side right through to the protected load circuits. Preventative

function monitoring also helps you reduce downtimes to a minimum.

## QUINT POWER Plus versions – the power supplies for demanding applications

The QUINT POWER Plus versions are the solution for complex applications under extreme ambient conditions.

With MOSFET integrated decoupling for 1+1 and n+1 redundancy, the Plus versions provide symmetrical load distribution and increase system availability. Faults can be detected early on by means of configurable output current signaling thresholds. At the same time, you save time and space thanks to the reduced wiring effort.

The Plus variants have a double OVP (overvoltage protection) and thus also protect your system against an increase in voltage. In the event of an error, the output is switched off to protect the loads against overvoltages.

The functional safety standards and directives ensure reliable protection for people, the environment, and machinery. The QUINT POWER-Plus variants meet these requirements (SIL 3, HFT = 1 in accordance with IEC 61508 and IEC 61511) and thus ensure maximum operational safety.

With a protective coating and ATEX and IECEx approval in accordance with the standards IEC 60079-0, IEC 60079-7, IEC 60079-11, and IEC 60079-15, it can also be used within zone 2 potentially explosive areas.

The Plus versions are rounded out by a wide temperature range of -40°C to +75°C for use under extreme ambient conditions.

# Power supplies

## QUINT POWER – powerful and space-saving

Our small QUINT POWER power supplies cover the power range from 30 to 100 W. These compact power supplies provide you with a perfect combination of preventive function monitoring and exceptional power reserves in a compact size.

Furthermore, you can choose between Push-in and screw connection technology for these power supplies for the low-power range.

## Your advantages <100 W

- Startup of difficult loads by using dynamic boost
- Preventive function monitoring reports critical operating states before faults occur
- Unique EMC resistance and low emitted interference
- High efficiency and long service life with low power dissipation and low heating
- Compact, slim-line design saves space in the control cabinet

## Technologies and advantages

### QUINT POWER <100 W

#### Powerful and space-saving

In the power range of up to 100 W, QUINT POWER meets the most high system demands with a compact size. The devices feature preventative function monitoring and exceptional power reserves. The high electromagnetic compatibility and electric strength, combined with low interference, enables use in demanding applications. Moreover, the devices have a high efficiency of up to 93.7% and a long service life.

High environmental resistance and marine approvals complete the QUINT POWER power supplies in the low power range.

### QUINT4-SYS for demanding applications

This power supply has been specially developed for the energy supply of compatible Phoenix Contact products via the DIN rail T-Bus bus connector. Furthermore, it can be directly latched onto the DIN rail.

The device features a protective coating and has IECEx, ATEX, and Hazloc approvals. The OVP (overvoltage protection) of <30 V DC protects your system against voltage increases. In the event of an error, the output is switched off to protect the loads against overvoltages. The output circuit is decoupled by a MOSFET.

### The power supply for operational amplifiers

The QUINT4-PS/1AC/2X15DC/2/PT stands out with a high degree of reliability at a high power density. It is used in measurement and control technology. It is particularly well-suited for supplying operational amplifiers and sensors. For this purpose, it has two outputs with a nominal current of +15 V DC/2 A and -15 V DC/1.4 A respectively.

Furthermore, with this power supply, the signaling of the DC OK contact can be set and power thresholds can be selected freely.

# Device circuit breakers for power supplies

## Device circuit breakers – suitable for everyone

An electrical system consists of many components that must work together in concert. Many loads are supplied by the same power supply in this type of arrangement. This creates dependencies that are important and critical to system availability.

Unscheduled machine downtime must be avoided at all costs. Therefore, it is very important to ensure that if there is a fault, any loads and circuits not involved remain unaffected by the fault. The supply voltage must likewise be maintained in the event of a fault. That is the only way to ensure smooth operation. If an overload or short circuit occurs, the best approach is to shut off the fault as soon as possible, depending on how high the current is. This is where device circuit breakers come in. The elements needed to ensure optimum device protection vary depending on the area of application and availability requirements. They differ from each other in how they are tripped, their shutdown behavior, and their tripping time. Furthermore, selection also depends on what precisely is needed in terms of protection and system availability.

## Power supplies

# TRIO POWER power supplies with standard functionality

Our new TRIO POWER power supplies are the ideal solution for machine building. Compact, robust, and always reliable: The TRIO POWER 24 V power supply sets the new standard in machine building. The Plug and Play solution for the control cabinet: simply unpack, connect, and you're done!

## Your advantages

- Space-saving due to its low overall width and direct inline capability
- Robust and reliable due to dynamic boost with a powerful output characteristic curve
- Easy handling with Push-in connection technology
- Smart diagnostics with multicolor LEDs and grouping relay contact for a clear status display, with optional IO-Link
- High system availability: power reliability in one device due to the integrated multichannel circuit breaker

# Technologies and advantages

## Save space

The vertically arranged front connection technology allows for narrow overall widths and saves space in the control cabinet. Due to TRIO POWER's inline capability, the available space can be used to its maximum. The low overall depth enables installation in 210 mm small housings.

## Robust and reliable

TRIO POWER provides a powerful package for drive technology applications with up to 960 W output power in 1 AC and 3 AC versions. The dynamic boost (150%/5 s) enables difficult loads to be started. With the powerful output characteristic curve, even capacitive loads can be charged without any problems.

## Easy handling

The easy handling of the power supplies are impressive: Push-in connection technology allows for quick and tool-free installation. Integrated marking fields can be used for easy EID and circuit marking. Due to an intuitive commissioning concept, the devices are quickly ready for use. The mechanical lock of the potentiometers ensures that the devices are also tamper-proof.

## TRIO power supplies with device protection and IO-Link

All TRIO POWER power supplies feature smart diagnostics with multicolor LEDs and a collective alarm contact. This is used to signal all relevant states such as DC OK, overload, and short circuit.

Devices with integrated multi-channel device protection and an IO-Link interface for diagnostics and parameterization are optionally available. The compact devices reduce the installation work, space requirements in the control cabinet, and material costs.

TRIO POWER power supplies therefore provide a safe supply and protection in one device.

 **IO-Link**

# Power supplies

## TRIO CROSS POWER for the power distribution board

The CrossPowerSystem is particularly well-suited for use in machine building. All functions and the space-saving design are tailored to the stringent demands in this field. Push-in connection allows quick and easy connection of 24 V DC loads. Tool-free

mounting and automatic contacting via convenient snap-on connections enable easy commissioning.

### Your advantages

- Push-in connection enables quick and easy snap-on connection of 24 V DC loads
- Fast commissioning: Tool-free mounting and automatic contacting in just one step (CrossPowerSystem)
- Reliable startup of difficult loads with dynamic boost
- Electrically robust with high electric strength
- High degree of flexibility with the wide temperature range of -25°C to +70°C and device startup at -40°C

## TRIO CROSS POWER

### With 8-channel electronic circuit breakers

The 20 A power supply with an integrated 8-channel electronic circuit breaker also provides reliable protection for disconnection in the event of errors (overload or short circuit) and comprehensive diagnostics options.

Channel-specific nominal voltages can be configured tool-free via LED buttons in 1 A increments (1 A to 10 A). You can also access the power supply from anywhere in the world via the IO-Link infrastructure.

## CrossPowerSystem

The CrossPowerSystem is a new open platform for modular and functional control cabinets. Three-phase devices can be mounted on the power distributor easily via Plug and Play. Time is money, and this is particularly true when it comes to setting up machines and systems.

Thanks to the combination of power distribution and switching devices, mounting on the power distribution board is now even faster. Integrated reverse pole protection also prevents errors and ensures even simpler commissioning.

## Power supplies

# UNO POWER Compact and highly efficient

With their high power density, UNO POWER power supplies are the perfect solution, particularly in compact control cabinets. The efficient technology in a small housing covers loads from 25 W to 960 W with low no-load losses and high efficiencies. The new, very narrow UNO POWER generation also stands out with its relay contact.

## Your advantages

- Save space in the control cabinet with the narrow overall width
- Save energy with the high degree of efficiency
- Outdoor installation and reliable device startup at -40°C
- Easy output voltage system diagnostics with the floating switch contact and DC OK LED
- Alignable without minimum clearance to neighboring modules

## Technologies and advantages

### From 25 W to 960 W

UNO POWER provides high power in a small space.

### Maximum energy efficiency

With efficiency coefficients of over 94% at nominal load, just a small amount of electrical energy is converted into undesired heat energy.

### Household appliance approval

Certification in accordance with DIN EN 603351-1 of the 55W/H and the 100W/H device allow use in private households.

### 2nd generation UNO POWER

UNO POWER power supplies are optimal for use in industrial applications and urban infrastructure.

The new generation covers the performance class up to 960 W. For simple system diagnostics, there is a floating relay contact available for the performance classes from 120 W to 960 W.

Compared with other products on the market, using the UNO POWER power supply provides excellent energy savings, achieved through low no-load losses (below 0.3 W) and optimized efficiency.

In machine building, the UNO POWER power supplies are the ideal partner for small systems with basic requirements. In urban infrastructures, the devices stand out due to their Power over Ethernet capability for the voltage range of 48 V to 56 V.

### UNO POWER for PoE applications

Eliminate the need for a separate power cable when installing devices in systems that are difficult to access. With industrial Power over Ethernet (PoE) solutions from Phoenix Contact, power supply and data transfer are combined in the same Ethernet cable.

The compact UNO POWER power supply ensures high availability in PoE applications. With its increased insulation resistance in accordance with IEEE 802.3bt, as well as lower EMC emitted interference at the DC output in accordance with EN 61204-3, it provides a high level of data integrity for your application.

## Power supplies

# STEP POWER For building automation

STEP POWER power supplies are optimally tailored to the needs of modern building automation – in both industrial and residential applications. The low no-load losses and high degree of efficiency ensure maximum energy efficiency and meet the requirements of Efficiency Level VI.

### Your advantages

- Energy savings through high efficiency in no-load and part-load operation (Efficiency Level VI)
- Space savings in the control cabinet with the narrow and low-profile designs combined with increased performance (up to 100%)
- Approval for household purposes (EN 60335) allows use in domestic applications for the first time
- Quick and easy commissioning with tool-free Push-in connection technology at a 45° angle with double terminal points

## Technologies and advantages

### Extreme ambient conditions

The PCB with protective coating ensures high availability even in demanding environmental conditions as low as -40 °C.

### Power over Ethernet

The first power supply for small PoE applications with four to eight ports for use in the field of building automation.

### Save space in the control cabinet

The STEP POWER power supplies are ideal for use in distribution boards and flat control panels.

### Efficiency Level VI and EcoDesign requirement

With low no-load losses of 0.1 W or 0.21 W and a high degree of efficiency, STEP POWER power supplies ensure optimum energy efficiency in buildings. The power supplies satisfy the high efficiency standard requirements, and therefore obtain Efficiency Level VI.

In addition, the European EcoDesign requirements are also fulfilled. The aim of this is also to improve the energy efficiency and environmental compatibility.

The graph shows an example of the degree of effectiveness of the STEP-PS/1AC/24DC/5/PT over the entire load range from 0 to 100%. From an output power of 25%, the degree of efficiency rises significantly above 90%. With a load of 75%, it even exceeds 94%.

### Building automation

Whether in the home charger in front of the house, the sun protection in the office building, or the baking oven in the supermarket, power supplies meet stringent demands for the safety of electrical devices. In addition to the standard industrial approvals, the STEP POWER power supplies are certified for household purposes in accordance with DIN EN 60335-1 for the first time. This is why they are the ideal solution for domestic applications.

## Power supplies

# Power supplies with IP67 degree of protection

The robust power supplies with IP67 degree of protection are ideally suited for decentral supply in the field. The weather-resistant aluminum housing protects the devices against dust and water. This enables the power supplies to ensure high system availability even in harsh ambient conditions. Various device connections provide flexibility during assembly.

## Your advantages

- Direct installation at the load in the field reduces cable lengths and saves space in the control cabinet
- The robust aluminum housing ensures high system availability with resistance to extreme ambient conditions (temperature, dust, and water)
- High shock and vibration resistance, plus electric strength
- Improved diagnostic options in the field with DC OK LED and AC OK LED
- NEC Class2 ( $P_{OUT} < 100 \text{ W}$ )

## DC/DC converters and DC/AC inverters

# QUINT DC/DC converter With SFB technology

Featuring HIGH functionality and leading technologies, our QUINT DC/DC converters >100 W deliver safety and reliability. SFB Technology, static boost, dynamic boost, and preventive function monitoring ensure maximum system availability. You can also adjust signaling thresholds and characteristic curves individually.

### SFB Technology

Designed by Phoenix Contact

### Your advantages >100 W

- SFB Technology selectively trips standard miniature circuit breakers
- Preventive function monitoring reports critical operating states before faults occur
- Power reserves for easy system extension and starting up difficult loads
- High efficiency and long service life
- Free choice between Push-in and screw connection

# Technologies and advantages

## Regulated DC voltage

Avoid disturbances in your application by using DC/DC converters. They regenerate voltages so that the load is always supplied with a regulated DC voltage, even in the case of long cable lengths.

DC/DC converters can be used to alter the voltage level or allow the creation of independent supply systems by means of electrical isolation.

## QUINT POWER >100 W

### Powerful with SFB Technology

The DC/DC converters for the high power ranges have SFB Technology (Selective Fuse Breaking). It ensures that standard miniature circuit breakers are selectively tripped so that loads connected in parallel can continue to operate without interruption.

These DC/DC converters are suitable for high power ratings with currents up to 20 A. Due to the large input voltage range, all common input and output voltages in performance classes up to 480 W are covered.

## Plus version for extreme ambient conditions

The Plus version of the DC/DC converter with MOSFET integrated decoupling for 1+1 and n+1 redundancy provides symmetrical load distribution and increases system availability. It also satisfies the requirements for functional safety (SIL 2). It achieves SIL 3 in conjunction with the QUINT4-S-ORING/12-24DC/1X40/+ redundancy module.

With a protective coating and ATEX and IECEx approval in accordance with the standards IEC 60079-0, IEC 60079-7, IEC 60079-11, and IEC 60079-15, it can also be used in zone 2 potentially explosive areas.

The new Plus version is rounded out by a wide temperature range of -40°C to +70°C for use under extreme ambient conditions.

The PCB protective coating (CO stands for coated) protects against dust, corrosive gases, and 100% humidity. Failures due to creepage currents and electrochemical migration caused by corrosion are also prevented.

# QUINT POWER

## Power supplies for railway technology

Our QUINT POWER power supplies and QUINT POWER DC/DC converters are used both in signal technology and in rail vehicles. All devices feature high reliability and safety and are also suitable for installation in confined spaces.

Our high-availability power supplies and DC/DC converters are harmonized with the typical requirements of signal technology. With a high efficiency factor and the use of high-quality components, including long-life capacitors, our products feature high reliability (MTBF >500,000 h) and a long service life. They also have an extended temperature range and electronics with a protective coating for use in outdoor systems. DC/DC converters are used in the signal technology of signal boxes to convert control voltages. The built-in electrical isolation also decouples and suppresses two potentials, and an ungrounded supply network can be established. For digital signal

boxes, we offer you converter solutions that can convert the direct current link voltage into conventional control voltage.

Our QUINT DC/DC converters in rail vehicles fulfill the high requirements on quality, zero maintenance, and reliability just like the power supplies do. We offer you DC/DC converters for all standard voltage levels of various train types. We guarantee the high availability with redundantly connected and decoupled DC/DC converters. Furthermore, the requirements applicable in railway technology on temperature, fire protection, resistance to EMC, vibration, and the environment, as well as the specific additional requirements of EN 50155, are adhered to.

### 3rd generation QUINT POWER with wide range input

The QUINT DC/DC converters with wide range input are ideal for applications in the rail industry and power generation, for example.

# DC/DC converters and DC/AC inverters

## QUINT POWER – powerful with boost function

QUINT DC/DC converters are also available in the power range up to 100 W. Particularly powerful and space-saving, these converters feature high efficiency, preventive function monitoring, and static and dynamic boost.

The low housing depth of 89 mm enables installation in flat control cabinets also, and the DNV-GL approval means they can be used in maritime environments. DC/DC converter start-up at -40°C ensures reliable operation, even under extreme ambient conditions.

In addition, you can choose between Push-in and screw connection.

### Your advantages <100 W

- Power reserves for easy system extension and starting up difficult loads
- Preventive function monitoring reports critical operating states before faults occur
- High efficiency and long service life with low power dissipation and low heating
- Compact, slim-line design saves space in the control cabinet
- Free choice between Push-in and screw connection

Item no.	<b>1066703</b>	<b>1066718</b>

## QUINT POWER <100 W

### Powerful and space-saving

These space-saving devices from the QUINT family offer high functionality from a power range of 30 W and also cover the power range of 60 W for the first time.

The low housing depth of 89 mm enables installation in flat control cabinets, and the DNV-GL approval means they can be used in maritime environments. Device start-up at -40°C ensures reliable operation under extreme ambient conditions.

## DC/DC converters and DC/AC inverters

# DC/DC converters for photovoltaic applications For decentral power supply

The DC/DC converters in the TRIO POWER family supply your system directly from the field and provide a reliable power supply even without a central grid. They are particularly well-suited for photovoltaic applications, where they also allow the central inverter to be started without a supplying grid.

### Your advantages

- Suitable for use in all photovoltaic systems with high input voltage due to conformity with standards UL 62109 and UL 1741
- High system availability with a robust design that ensures partial discharge resistance
- Direct, immediate supply from the solar field to supply the string monitoring function within string combiner boxes
- Quick and easy installation with Push-in connection

# DC/DC converters for photovoltaic applications

		UNO-PS/350-900DC/24DC/60W
		<a href="#">2906300</a>

## Connection options for Combiner Boxes in photovoltaic systems

In the application shown, the Combiner Box is connected to a supply line (red, e.g. 230 V AC) and a signal line (black). Laying the lines involves significant installation costs.

The TRIO DC/DC converters and the UNO DC/DC converters enable direct connection to string voltages of up to 1500 V DC. This means that the Combiner Box is supplied directly from the photovoltaic panel and eliminates any additional installation costs.

In a further expansion stage, the signal line can be replaced by a wireless connection.

## DC/DC converters and DC/AC inverters

# QUINT inverters For generating alternating current

The new DC/AC inverter in the QUINT POWER family offers a compact solution to generate alternating current in DC applications. It delivers a pure sine curve and current with constantly high quality. The inverter also ensures the trouble-free supply of voltage-sensitive loads.

### Your advantages

- Manual selection of AC output voltage via signal terminal enables worldwide use
- Pure sine curve at the output
- USB interface for connection to industrial PCs, for example
- Can be switched in parallel for various applications
- Compact design saves space

# QUINT inverters

	<b>QUINT inverter</b>		<b>Accessories</b>
			
Input	20 V DC ... 30 V DC		
W x H x D in mm	180 x 130 x 125		
<b>480 W / 600 VA</b>			<b>PORT BRIDGE</b>
Type	QUINT4-INV/24DC/1AC/600VA/USB	Type	RJ45-PORT-BRIDGE/3XPARALLEL
Item no.	<b>1067325</b>	Item no.	<b>1205351</b>

## Parallel connection with synchronized AC output

You have the option to connect two devices in parallel. This increases the operational safety of your system in the event of a power supply failure (redundancy) or it gives you the option to increase the power. You can double the output power by using the DC/AC inverter. Communication between the two devices synchronizes the phase relation in both operating modes.

## Three-phase grid for a drive application

You can connect three devices in parallel to create a three-phase grid using the RJ45 adapter. The inverters communicate with each other in order to synchronize the 120° phase shift in real time. This enables operation of three-phase drives.

# Redundancy modules

## For maximum operational safety

To prevent failures and downtime of complex applications, redundant power supply solutions are necessary. Two power supplies connected in parallel can be decoupled with either active or passive redundancy modules.

**QUINT ORING**

Provides permanent monitoring of the input voltage, output current, and decoupling section

More information starting on page 50

**QUINT DIODE**

Ensures constant redundancy through redundant wiring up to the load with two positive output terminals

More information starting on page 54

## Active and passive redundancy

### Active redundancy with MOSFETs

Our 1- or 2-channel active redundancy module versions monitor themselves and the connection wiring through to the load. In conjunction with a QUINT POWER power supply, you can extend the system to include complete redundancy monitoring from the AC feed-in to the DC load. By continually monitoring the AC and DC voltage levels, the respective wiring, and the simultaneous decoupling of the load current,

critical operating states can be detected and signaled early on.

### Passive redundancy with diodes

Diodes enable simple decoupling of two power supplies on the DC side. This is useful in particular when power supplies are in parallel connection to increase power or for redundancy purposes. If one device fails due to malfunctions, the second power supply automatically takes over the entire

supply for the DC load. The diode is not subject to preventive function monitoring, and the connecting cables through to the DC load are not monitored.

**TRIO DIODE**

With Push-in connection for easy installation

More information starting on page 54

**UNO DIODE**

Compact diode module for decoupling power supply units connected in parallel

More information starting on page 54

**STEP DIODE**

Diode module for little space in the control cabinet

More information starting on page 54

## Redundancy modules

# QUINT ORING

## For decoupling, monitoring, and controlling

The new 4th generation QUINT ORING modules now feature application-specific surge protection, as well as two outputs that ensure maximum system availability. The ACB Technology (Auto Current Balancing) also doubles the service life of the redundantly-operated power supplies, and thus contributes to minimizing the costs of your system.

### Auto Current Balancing Technology

Designed by PHOENIX CONTACT

### Your advantages

- Preventive function monitoring through constant monitoring of the input voltage, output current, and decoupling section
- Consistent redundancy through to the load with two positive output terminals
- Service life doubled with uniform load distribution
- Energy savings of 70% with MOSFETs
- Protection against overvoltages at the output (overvoltage protection) increases operational safety

## Active redundancy modules

	QUINT ORING			
		 		 
Input	8 V DC ... 29.5 V DC	8 V DC ... 29.5 V DC	18 V DC ... 28 V DC	
W x H x D in mm	39 x 130 x 132	46 x 130 x 132	66 x 130 x 125	
	<b>12 V ... 24 V / 2 x 10 A / 1 x 20 A<sup>1</sup></b>	<b>12 V ... 24 V / 2 x 20 A / 1 x 40 A<sup>1</sup></b>	<b>24 V / 2 x 40 A / 1 x 80 A</b>	
Type	QUINT4-ORING/12-24DC/2X10/2X10	QUINT4-ORING/12-24DC/2X20/2X20	QUINT-ORING/24DC/2X40/1X80	
Item no.	<b>1088206</b>	<b>1088207</b>	<b>2902879</b>	

<sup>1)</sup> The ATEX and IECEx approvals are in preparation. In the e-shop, there is the opportunity to choose between three additional overvoltage protection levels.

### QUINT ORING with ACB Technology (Auto Current Balancing)

As a result of asymmetries, the load is often supplied by just one power supply unit, while the other power supply unit runs in no-load operation. This results in a thermal load on the working power supply unit, and therefore, rapid aging. ACB Technology extends the service life of redundantly operated power supplies by evenly utilizing the power supply units.

Thanks to the use of modern MOSFET technology, the resulting thermal load is reduced by up to 70% compared to using a diode. The lower level of power dissipation ensures that all the control cabinet components stay cooler and doubles the overall service life of the redundant system.

### Decoupling, monitoring, and control

The QUINT ORING ensures the decoupling of the power supplies and the constant monitoring of the input voltage and the output current. You will be warned at an early stage if there is any loss of redundancy.

A system consisting of two QUINT POWER power supplies and a QUINT ORING limits the output voltage to 32 V DC in case of a fault. In the e-shop, you can choose between three additional overvoltage levels for sensitive loads: 26.5 V, 28.8 V, and 30 V.

# Redundancy modules

## QUINT S-ORING for decoupling and monitoring

The QUINT S-ORING is an active, 1-channel redundancy module for the separate structuring of a redundant system.

In combination with the fourth generation of the QUINT POWER power supplies, the input voltage and decoupling section are monitored continuously. The preventive function monitoring feature indicates all critical operating states of the redundant system.

With the overvoltage protection (OVP), the devices protect sensitive loads against static surge voltages, thus maximizing operational safety:

VP version >30 V  
(QUINT4-S-ORING/12-24DC/1x40/VP)  
Plus version >28.8 V  
(QUINT4-S-ORING/12-24DC/1x40/+)

## Your advantages

- Consistent redundancy up to the load
- Constant monitoring of input voltage and decoupling section
- Energy savings of 70% by decoupling with MOSFET
- Protection against overvoltages at the output (overvoltage protection) increases operational safety
- Protective coating with ATEX and IECEx approval for extreme ambient conditions

## Active redundancy modules

	QUINT S-ORING		
Input	8 V DC ... 30 V DC	8 V DC ... 27.5 V DC	8 V DC ... 26 V DC
W x H x D in mm	32 x 130 x 125	32 x 130 x 125	32 x 130 x 125
	<b>12 V ... 24 V / 1 x 40 A</b>	<b>12 V ... 24 V / 1 x 40 A / VP<sup>1</sup></b>	<b>12 V ... 24 V / 1 x 40 A / +<sup>2</sup></b>
Type	QUINT4-S-ORING/12-24DC/1X40	QUINT4-S-ORING/12-24DC/1X40/VP	QUINT4-S-ORING/12-24DC/1X40/+
Item no.	<a href="#">2907752</a>	<a href="#">1043418</a>	<a href="#">2907753</a>

<sup>1)</sup> Surge voltages are limited to 30 V. <sup>2)</sup> Surge voltages are limited to 28.8 V.

### Decoupling and monitoring

For the separate structuring of a redundant system, the QUINT S-ORING is well-suited to be an active, 1-channel redundancy module.

Combine the QUINT S-ORING with the 4th generation QUINT POWER power supply. You will have a fully monitored system that immediately reports critical operating states.

### Operational safety comes first

Availability is generally a top priority, especially in process engineering systems. Overvoltage protection (OVP) protects downstream loads from surges greater than 30 V DC or 28.8 V DC at the output.

The redundant system from the QUINT POWER power supply and the active redundancy module QUINT4-S-ORING/+ ensure maximum operational safety with SIL certification. Use the system in applications with functional safety up to a safety integrity level of SIL 3 (IEC 61508).

## Passive redundancy modules

### QUINT DIODE

Robust design for high system availability, even under demanding ambient conditions.

### TRIO DIODE

With Push-in connection for fast and easy installation.

### UNO DIODE and STEP DIODE

For decoupling small loads.

## Redundancy modules for easy decoupling

Diode modules ensure safety when supplying the system.

STEP DIODE, UNO DIODE, TRIO DIODE, and QUINT DIODE are the ideal choice when it comes to easy decoupling of power supplies. They can be used for nominal voltages of 5 V DC to 48 V DC.

## Decoupling via diodes

Easy decoupling of power supplies that are operated in parallel ensures a high level of availability. If the power supplies are decoupled, a short circuit no longer has any effect on the load.

# Uninterruptible power supplies

## No problems during mains interruptions

Mains interruptions can have serious consequences. We provide the following solutions for high system availability, even in the event of a mains failure:

- DC and AC UPS modules with communication interfaces
- UPS modules with integrated power supply or energy storage
- Comprehensive selection of energy storage devices

### DC UPS

- QUINT UPS with IQ technology
- QUINT, UNO, and STEP UPS with integrated energy storage
- MINI and TRIO UPS with integrated power supply

More information starting on page 60

### DC UPS with integrated capacity and buffer modules

- With double-layer capacitors
- With electrolytic capacitors

More information starting on page 82

### AC UPS

- QUINT UPS with IQ technology
- TRIO UPS with integrated energy storage

More information starting on page 72

### Energy storage

- Different storage technologies for your requirements

More information starting on page 80

## Uninterruptible power supplies

## Power management software

Monitor and configure several power supplies and UPS systems simultaneously with our POWER MANAGEMENT SUITE, free of charge. The intelligent communication functions inform you as soon as a situation becomes critical. This reduces the amount of maintenance work needed and increases the availability of your system. It supports all QUINT4 and TRIO 2G devices with USB or EtherNet/IP™ interfaces. The software is available to you to download on the Internet free of charge.

Server

Client

Agent

## Your advantages

- Holistic system monitoring: Monitor several power supplies and UPS systems from different PCs
- Easy configuration: All connected systems can be configured via the user interface directly on the system or via a control room
- Clear, user-friendly dashboard
- PC shutdown: One or more PCs can be shut down in the event of a mains failure
- Modular setup: Environment tailored in accordance with the application

# POWER MANAGEMENT SUITE

## How our POWER MANAGEMENT SUITE works

### Easy configuration

All connected systems can be configured via the user interface directly on the system or via a control room.

### Dashboard

Clear, user-friendly dashboard with an overview of all systems at all times.

### PC shutdown

One or more PCs can be shut down in the event of a mains failure.

### Integrated system monitoring

Monitor several power supplies and UPS systems from different PCs.

### Modular setup

Environment specific to the application.

## Applications

### Single-user

An industrial PC is connected directly to the PHOENIX CONTACT power supply system via the USB or Ethernet cable. The system supplies the industrial PC with power. In the event of a mains failure, the system and the industrial PC undergo a controlled shutdown. In addition, the industrial PC is used to monitor and configure the system.

### Local network type 1

An industrial PC is connected directly to the PHOENIX CONTACT power supply system via the USB or Ethernet cable. An additional PC connected to the local network is to be used to monitor and configure the system.

### Local network type 2

You can also realize type 1 with several clients in a local network. To do so, install the POWER MANAGEMENT SUITE client module on an additional PC.

### Local network type 3

In addition to type 2 in a local network, you also have the option of connecting your PC to several systems at the same time. To do so, you have to connect the industrial PC on which the POWER MANAGEMENT SUITE Server is installed to an additional system via the USB or Ethernet cable.

## Uninterruptible power supplies

# Supply DC loads without mains For risk-free system operation

Our uninterruptible power supplies for DC applications supply your application reliably even when the supply network fails.

Select your DC UPS: Intelligent with IQ technology or space-saving with integrated energy storage or integrated power supply.

# DC UPS

## QUINT UPS

You can find all QUINT UPS modules and their matching energy storage devices starting on page 60.

## With integrated power supply

Space-saving solution – all you have to do is supplement the energy storage. Page 66

## With integrated energy storage

Space-saving solution – all you have to do is connect the power supply upstream. Page 68

## QUINT UPS for DC applications

Reliably protect your DC loads against power supply failure. The QUINT UPS for 24 V DC with output currents of 5 A to 40 A is suitable for mains interruptions that last for up to several hours.

Monitor and optimize your energy storage automatically with IQ Technology. The POWER MANAGEMENT SUITE configuration and management software and data cables from Phoenix Contact are available for this purpose.

- Substantial power reserve**
- For mains and battery operation
  - Power Boost static power reserve
  - SFB Technology (page 7)

- Easy integration into industrial networks thanks to interfaces**
- PROFINET
  - EtherNet/IP™
  - EtherCAT®
  - USB

## IQ Technology

Designed by Phoenix Contact

- Adaptive current management**
- For fast recharging and high energy storage device availability

## TRIO UPS with integrated power supply

The TRIO DC UPS with integrated power supply supplies your DC loads reliably and with minimal space requirements.

You can easily shut down connected industrial PCs via the integrated USB interface. Startup from energy storage is possible even without power supply input, thus simplifying the commissioning process. You can safeguard your system for up to several hours with the large selection of energy storage devices. With POWER MANAGEMENT SUITE software, you can optimally adapt the behavior of the UPS to your application.

You can find all TRIO UPS modules and their matching energy storage devices on page 67.

# Uninterruptible power supplies

## QUINT DC UPS with IQ Technology – for industrial networks

The first intelligent UPS with integrated Ethernet interface for integration into established industrial networks. The UPS modules for 24 V DC with output currents ranging from 5 A to 40 A enable you to create a custom solution consisting of a power supply, UPS module, and energy storage. With

IQ Technology and a powerful battery charger, the battery management system (BMS) ensures high system availability.

You can find all QUINT devices with the matching energy storage devices on page 64.

**IQ Technology**   
Designed by Phoenix Contact

## Your advantages

- Evaluation of the state of health (SOH) and state of charge (SOC), thanks to the intelligent battery management system (BMS)
- Automatic recognition of battery capacities and technologies (PB, VRLA-VTR, LiFePO<sub>4</sub>)
- Monitoring of output current and voltage, as well as manual connection and disconnection of the system
- SFB Technology selectively trips standard miniature circuit breakers; loads connected in parallel continue to work

## QUINT CHARGER – charging rectifier for DIN rails

With the QUINT CHARGER, the additional charging device for QUINT DC UPS, both lead and lithium batteries can be charged more quickly. The temperature-optimized charging process increases the service life of the energy storage, while the higher charging current reduces the charging time.

The two devices communicate via system communication, the coordinated system for optimized battery charging. The charging parameters are configured via the USB interface. Battery status is indicated via LEDs and signal contacts.

You can find the right energy storage device on page 66.

# Uninterruptible power supplies

## IQ Technology for an intelligent UPS system

IQ Technology is the key to an intelligent power supply solution. An intelligent UPS with IQ technology monitors and optimizes the energy storage, reduces maintenance effort, and increases your system availability.

It determines all relevant energy storage states. This ensures the crucial transparency required to guarantee supply stability and the best possible utilization of the energy storage devices at all times.

The intelligent battery management calculates the remaining runtime available. It advises as soon as a threshold value is reached. In this way, your system works as long as possible

and is shut down before the battery voltage runs out.

The connected energy storage device is detected automatically. The optimally adjusted charging characteristic maximizes the service life of the energy storage device. The adapted charging current provides for the quickest possible recharging and availability of the energy storage device.

You can keep an eye on your system at all times with the intelligent IQ Technology devices. With the QUINT DC UPS and the QUINT CAP and the integrated interfaces for PROFINET, EtherNet/IP™, EtherCAT®, and

USB, monitoring, configuration, and shutting the system down in a safe state are possible at all times and anywhere in the world.

## The first intelligent QUINT DC UPS for integration into established industrial networks

With the intelligent QUINT DC UPS for integration into existing industrial networks, you are ready for Industry 4.0. The integrated interfaces enable you to monitor, configure, or shut down the system in a safe state at any time, regardless of location.

### Interfaces

The QUINT DC UPS can be easily integrated into the following existing industrial networks via various interfaces:

- PROFINET
- EtherNet/IP™
- EtherCAT®

All network technologies, devices with USB interface, and devices without interface are available in all four performance classes (5 A, 10 A, 20 A, and 40 A).

### 2-port switch

Our QUINT DC UPS has a 2-port switch. The device can therefore be integrated flexibly into existing industrial networks.

### Extended load management

The extended load management system consists of the following functions:

- Energy monitoring: Monitoring input and output voltages and the associated currents
- PC shutdown function: Reliable shutdown of your industrial PC in the event of a mains failure without data loss, and automatic restart of the industrial PC when the mains power returns
- Cold-start function: UPS startup even without mains power

### Function blocks

We include the corresponding function blocks for the following engineering environments so that the QUINT DC UPS can be commissioned quickly:

- PLCnext
- TIA Portal
- Studio 5000
- TwinCAT

### Device descriptions

If the appropriate function block for your application is not available, you can create your own custom function blocks using our device descriptions.

QUINT DC UPS

QUINT CAP

## IQ Technology

Designed by Phoenix Contact

### Interfaces

Easy integration into industrial networks:

- PROFINET
- EtherNet/IP™
- EtherCAT®
- Modbus/TCP
- USB

EtherNet/IP™

EtherCAT® 

### System communication

Detects the connected battery type and extends its remaining service life via an adapted charging characteristic.

### Intelligent battery management

#### SOC (State of Charge)

Describes the current state of charge and the remaining energy storage device runtime.

### Intelligent charging

Adapts the charging current, and thereby ensures fast recharging and availability.

### Intelligent battery management

#### SOH (State of Health)

Reports on the life remaining for the energy storage device and provides early warning of failures.

# Help for choosing the DC UPS and energy storage device

Select your combination of QUINT DC UPS and energy storage device here.

The UPS modules for 24 V DC with output currents ranging from 5 A to 40 A enable you to create a custom solution consisting of a power supply, UPS module, and energy storage. The QUINT DC UPS is available with integrated interfaces for PROFINET, EtherNet/IP™, EtherCAT®, and USB. If no network connection is needed, there are also variants without an interface.

# Help for choosing the DC UPS

Select your QUINT DC UPS with integrated energy storage device here.

## QUINT DC UPS

The QUINT DC UPS is extremely space-saving and can be retrofitted in existing systems very easily. Simply connect a 24 V DC power supply unit upstream, and the UPS solution is complete. When the energy storage devices have exceeded their service life, they can be quickly and easily replaced.

- IQ Technology: Based on the ambient temperature, the UPS will calculate the optimal charging currents and, in the process, increase the service life of the energy storage device
- Minimal wiring effort
- Maintenance-free energy storage device with lead AGM technology

### UNO DC UPS

Harmonized with the UNO POWER power supply range, the UNO UPS with 60 W output power is available. The uninterruptible power supply operates flexibly at input voltages ranging from 22.5 to 29.5 V DC. The integrated lead AGM energy storage ensures long buffer times of up to 45 minutes.

### STEP DC UPS

The STEP UPS has been designed specifically for use in distribution boards. The uninterruptible power supply operates flexibly at input voltages ranging from 22.5 to 29.5 V DC. For 24 V, the integrated lithium-ion energy storage device ensures long buffer times of up to 90 minutes. The 12 V version

operates at input voltages ranging from 10 V DC to 16.5 V DC. The output current is buffered for up to 45 minutes.

## Uninterruptible power supplies

# Supplying AC loads without mains supply For online and offline operation

Our uninterruptible power supplies for AC applications provide a pure sine curve at the output. The sine wave generated in battery operation is synchronized to the grid previously used for supply.

Select your AC UPS: Intelligent with IQ technology or space-saving with integrated energy storage.

# AC UPS

## QUINT AC-UPS/500VA

Buffers 400 W for up to 2 hours. You can find the right energy storage device starting on page 72.

## QUINT AC-UPS/1KVA

For a seamless transition with online topology. You can find the right energy storage device starting on page 74.

## TRIO AC UPS

The integrated energy storage device saves more space in the control cabinet. You can find the versions with 120 V and 230 V starting on page 76.

## QUINT AC UPS

The clever IQ Technology in the QUINT UPS for AC applications monitors and optimizes the operation of your energy storage device. To supply your processes and applications as long as possible, use the complete energy content. You will be warned at an early stage of possible failures, because your UPS detects the remaining expected life of the energy storage device.

At the same time, the UPS detects the current performance of the energy storage device. The different energy storage types available allow the optimized operation of your system.

The UPS can be integrated via the USB interface, which means it can be connected to higher-level controllers. The

QUINT AC UPS delivers a pure sine curve at the output. The sine wave generated during battery operation is synchronized to the grid previously used for supply, allowing seamless transition.

# Help for choosing the AC UPS

Select your combination of QUINT AC UPS/500VA and energy storage device here.

With this new QUINT AC UPS, you can also reliably protect smaller loads up to 500 VA. Only one energy storage device is needed to safeguard your system.

# Help for choosing the AC UPS

## TRIO AC UPS with integrated energy storage

The TRIO AC UPS with integrated energy storage saves space in your control cabinet. The UPS module and energy storage device are combined in one housing. This makes retrofitting existing systems particularly easy.

The TRIO UPS for AC applications delivers a pure sine curve at the output. The sine wave generated during battery operation is synchronized to the grid previously used for supply, allowing seamless transition. The module can also be started without mains supply via the energy storage device.

## Select your combination of TRIO AC UPS with integrated energy storage device here.

The TRIO AC UPS with Push-in Technology for DIN rails saves space and reliably supplies your AC loads.

The UPS module delivers a pure sine curve at the output. The sine wave generated in battery operation is synchronized to the grid previously used for supply. Connected industrial PCs can be shut down via the integrated USB interface.

Power supply    UPS module    Energy storage

TRIO UPS, 1~

## Uninterruptible power supplies

# Energy storage For the optimal supply of your system

With the energy storage devices for our modular system of uninterruptible power supplies, you will always have the right solution for your system.

## Technologies and advantages

### UPS-BAT/LI...

For a long service life with long buffer times.

- Lithium iron phosphate technology

### UPS-BAT/VRLA-WTR...

For longer buffer times at extreme temperatures.

- Pure lead AGM

### UPS-BAT/PB...

For long buffer times under normal conditions.

- Lead AGM

## Intelligent energy storage for QUINT UPS

Choose among our various storage mediums. Do you need a longer service life or very long buffer times? Would you like energy storage that is maintenance-free, or would you like to use it in extreme ambient temperatures? Whatever your requirements, we have the right energy storage for you.

All energy storage devices also feature the following properties:

- Quick installation with automatic detection of the energy storage and tool-free replacement during operation
- Constant communication with QUINT UPS for continuous monitoring and intelligent management

- Extremely long service life with optimized charging characteristics based on the technology and ambient conditions
- Immediate availability, as all energy storage devices leave our warehouse fully charged

Type	Temperature	Service life at +20°C	Service life at +50°C	Charging cycles at +20°C
UPS-BAT/LI...	-20°C ... +60°C	10 years	2 years	1,500
UPS-BAT/VRLA-WTR...	-25°C ... +60°C	12 years	1.5 years	300
UPS-BAT/PB...	0°C ... +40°C	6 years ... 8 years	1 year	250

## Uninterruptible power supplies

# DC UPS with integrated capacity Intelligent protection during mains failures

The QUINT CAP modules with integrated interface can be integrated easily into industrial networks. The DC UPS with integrated capacity prevents cyclic failures of up to several minutes and combines an electronic switchover unit and energy storage device in one housing.

## Your advantages

- Easy integration into industrial networks with freely selectable interface: USB/Modbus/RTU, PROFINET, EtherNet/IP™/Modbus/TCP, EtherCAT®
- Long service life with maintenance-free double-layer capacitors
- Reliable startup of difficult loads with static boost
- Comprehensive signaling: Preventive function monitoring reports critical operating states
- Extension of the buffer time with parallel connection of up to four devices

## Buffer modules and DC UPS modules with integrated capacity

### Maintenance-free

- High reliability
- Long service life
- High cycle rates >500,000

### Flexible fields of application

- Modular design
- Temperature range: -40°C ... +60°C
- Easy to integrate in existing networks

### Effective protection

- Inrush current control and optimal starting of loads through soft start function
- Protection from overload and overheating
- Protection from overvoltages and undervoltages

## QUINT CAP – DC UPS with integrated capacity

The maintenance-free QUINT CAP modules prevent cyclic failures lasting up to several minutes. With their integrated interface, they can be integrated easily into industrial networks. They combine an electronic switchover unit and energy storage in the same housing, and thus save space. Maintenance-free double-layer capacitors are used as energy storage devices.

Depending on the application, modules are available with 1 kJ, 4 kJ, 8 kJ, and even 16 kJ, with or without communication interface. QUINT CAP modules are ideal for use in

the fields of machine building, intralogistics, infrastructure, and the wind industry.

With the POWER MANAGEMENT SUITE, a software for easy and fast configuration and monitoring of your UPS system is available in the free download area.

For more information on this, see page 56.

## QUINT BUFFER – buffer module with electrolytic capacitors

The compact QUINT buffer module bridges failures within seconds. It combines an electronic switchover unit and an energy storage device in one housing. The capacity module stores the energy required to bridge mains failures in maintenance-free electrolytic capacitors.

- Maximum energy efficiency
- High system availability due to long capacitor service life
- Wide temperature range of -40°C to +70°C
- Static boost for starting up difficult loads
- Integrated “soft start” for limiting the inrush current and preventing power supply unit overload
- Comprehensive signaling on the device (LEDs and signal terminals)
- Reliability and safety with integrated safety functions

# Power Reliability – endless possibilities

## Solutions for superior system availability

The increasing electrification, networking, and automation leads to a growing dependency on reliable power supply solutions. For efficient system operation, we offer you the solutions that combine surge protection, EMC filters, energy measuring devices, power supplies, and circuit breakers. Choose Phoenix Contact, a partner who provides you with holistic concepts for high system availability.

### Surge protection

Our coordinated product portfolio of surge protection enables the implementation of protection concepts for almost any application.

### EMC filters

The EMC filters limit and filter high-frequency interference voltages and currents for an EMC-compliant power supply.

### Energy monitoring

Efficient monitoring, providing the basis for your energy management. Our coordinated measuring devices enable efficient energy data acquisition.

Power Reliability

### Power supplies

Supply your applications safely and reliably. Choose from our range: AC/DC power supplies, DC/DC converters, DC/AC inverters, or power electronics.

### Redundancy modules and UPS

With our redundancy modules and uninterruptible power supplies, you prevent plant shutdowns and power failures.

### Device circuit breakers

With the electronic, thermomagnetic, and thermal device circuit breakers you protect your equipment against overload and short circuit.

# COMPLETE line – the comprehensive solution for the control cabinet

The COMPLETE line system encompasses technologically leading and coordinated hardware and software products, consulting services, and system solutions that help you optimize your processes in control cabinet building. Engineering, purchasing, installation, and operation become significantly easier for you.

## Your advantages in detail:

### Comprehensive product portfolio

With COMPLETE line, we offer a complete product portfolio of technologically leading products. This includes:

- Controllers and I/O modules
- Power supplies and device circuit breakers
- Terminal blocks and distribution blocks
- Relay modules and motor starters
- Signal conditioners
- Safety technology
- Surge protection
- Heavy-duty connectors

### Intuitive handling

With the simple, intuitive handling of the coordinated hardware components, you will save time during installation, startup, and maintenance. With Push-in connection technology, you can wire applications quickly and without using tools. The broad, technologically leading product portfolio will always provide you with the right product for standard or special applications.

### Save time throughout the entire engineering process

The clipx ENGINEER planning and marking software supports the entire process of control cabinet building. The program features an intuitive user interface that enables the individual planning, automatic checking, and direct ordering of terminal strips.

### Reduced logistics costs

Reduced variety of parts with standardized marking, bridging, and testing accessories. The COMPLETE line system coordinates products, design, and accessories so that you benefit from maximum reusability and thus reduce your logistics costs.

### Optimized processes in control cabinet building

COMPLETE line supports you, from engineering through to manufacturing, in designing your control cabinet production as efficient as possible. This is how your customized concept for optimizing your processes in control cabinet building is created. Our terminal strip production helps you to flexibly manage order peaks or to supply your control cabinet production with fully assembled DIN rails just in time.

## COMPLETE line

### The new standard for the control cabinet

Discover the extensive COMPLETE line product portfolio and find out more about COMPLETE line and the comprehensive solutions for your control cabinet.

## Open communication with customers and partners worldwide

Phoenix Contact is a global market leader based in Germany. We are known for producing future-oriented products and solutions for the electrification, networking, and automation of all sectors of the economy and infrastructure. With a global network reaching across more than 100 countries with over 22,000 employees, we maintain close relationships with our customers, something we believe is essential for our common success.

Our wide range of innovative products makes it easy for our customers to implement the latest technology in a variety of applications and industries. This especially applies to the target markets of energy, infrastructure, industry, and mobility.

You can find your local partner at
