# The EasyLogic<sup>™</sup> PM1130H dual/alternate source power and energy meters

Two energy registers (Utility vs Genset, Utility vs Solar, Utility vs Wind, or a combination of any two power sources) separately records consumption for dual source energy accounting. Ideal for any installation which requires split energy monitoring for two conditions, e.g., running and Idle. Form A relay to control the load in the event of abnormality in the electrical circuit including excess consumption of power. The meters can be used for secondary billing application in large commercial complexes or buildings as tenant meters in custom panels, switch boards, switchgear, genset panels, non-renewable energy panel and OEM panel board.

Offering all the measurement capabilities required to monitor the electrical installation in a single 96 x 96 mm unit, with 8 segment alpha-numeric bright, large 14.2 mm high LED display.

PM2200R meter

Introducing the new Quick Click enabled Easylogic PM2200R series, next generation power meter which offers all of the measurement capabilities of the PM2200 series with the added benefit of plug & play CT installation. For installers - time, labour, and rework savings of over 75 % compared to traditionally wired meters and CTs.

Applications

Cost management:

- Electrical installation remote monitoring
- Energy accounting and balancing
- Tenant and sub-billing
- Panel instrumentation
- Energy management
- Network management:
  - Power quality analysis: THD % and individual harmonics up to the 15th order (PM2200R)
  - Measurement of True PF and Displacement PF
  - Recording Min/Max values of instantaneous parameters with date & timestamp
  - Calculates % unbalance for voltage & current
- Main characteristics:
  - Simple CT connection and installation with Quick Click-enabled meters and CTs: A single RJ-45 port on the meter allows for direct connection to the RJ-45 port on Schneider Electric Quick Click CTs. As Quick Click CTs have a low voltage output, the shorting block required for traditional 5 A output CTs is no longer needed. CT input screw terminals on the meter, screw terminals on the CTs, and screw terminals on the shorting block are all eliminated with the Quick Click solution.
- Easy to install: Mounts using two clips, no tools are required. Compact meter with 54 mm depth, connectable up to 480 ±10 % V AC Volts L-L without voltage transformers for installations compliant with measurement category III, and double insulated.
- Easy to operate: Intuitive navigation with self guided menus and test LED at the front panel used for test and calibration of the meter on site or laboratory. Heart-beat LED indicates normal functioning and communication status if connected to RS-485 network.
- Product standard compliance
  - Active energy Class 1.0 as per IEC 62053-21<sup>+1</sup>
  - Reactive energy Class 1.0 as per IEC 62053-24 (partial compliance for reactive energy test clause only)
- Power quality analysis: The PM2220R offers THD % measurements and Individual harmonics up to the 15th order.
- Load management: Simultaneous display of peak, present, predicted & rising demands of all the four demand parameters (W, VA, VAR, Amps)
- Billing: Tenant billing/utility meter cross check (where local regulations are not applicable).
- Timer: Active load timer, meter operation timer and run hours timer. These features help advise maintenance requirements and scheduling.
- Display type: Monochrome graphical LCD of 128 x 128 resolution with viewable area of 67 x 62.5 mm lets the users read all three phase measured values simultaneously. The bright anti-glare display features large characters and powerful backlighting for easy reading even in extreme lighting conditions and viewing angles. Intuitive menus, multi-language text, icons and graphics create a user-friendly environment to learn about your electrical network.

 $^{\scriptscriptstyle +1}$  Meters have been tested to ANSI C12.20 and IEC 62053-21 assuming an ideal CT

- Password: Field configurable password for securing set up information and prevent tampering of integrated values.
- Cyber security: Option for disabling RS-485 port through front panel keys against unauthorized access. It helps during installation and trouble shooting of communication network.
- LCD display: 5 digits for energy, 5 or 6 digits for other parameters, with auto scaling.
- Daily time snap shot (PM2220R): The values from summary page will be stored as snap shot and refreshed by a configurable time next day.
- Rate counters (PM2220R): 2 configurable counters display values in custom specified units based on energy recorded (e.g., kgCO<sub>2</sub> carbon emission or energy cost).
- Energy preset feature: For retrofit application.
- Suppression current: To disregard measurement of induced current or negligible current flowing in the circuit, settable from 5 mA to 99 mA.
